# GENERAL INFORMATION

## Protection

Designing a good workplace for welders and grinders and preventing risks are the primary prerequisites for any company or organization involved in professional welding. In addition to these social and humane aspects, there are also factors such as, reducing injuries and sickness absence of welders and other workers, reducing fire hazard and the potential loss of production due to damage, which should be taken into account. Optimum protection of workers against the risks involving welding light, noise and heat are essential for responsible management.

CEPRO are specialists in designing safe welding and grinding work areas and can provide a comprehensive range of products and services. CEPRO products not only increase the safety of the working area, but they also increase efficiency resulting in an improved workflow and cost-savings.

CEPRO products are the result of years of experience in the design and equipping of safe welding and grinding work areas. Our products comply with all the currently applicable standards and regulations, including several subfields.

This brochure elaborates on the various risks associated with the harmful effects of welding light for which CEPRO systems and products can provide you with solutions. Our team at CEPRO have years of experience and know-how to help you and are at your disposal without any obligation. Feel free to contact us for more information.

## Welding screens

The main dangers of unprotected exposure to welding light are: arc eye (during short-term exposure), cataract (by prolonged exposure) and skin burn. The latter can also lead to skin cancer. The welder protects himself by wearing a welding mask and protective clothing but bystanders are exposed to the same dangers. This is why it is important to protect bystanders in the work place to prevent long-term illness.

When protecting the welding area, it is important not to isolate it from other work areas which is one of the reasons why a welding curtain should be made of transparent material. This not only helps to keep an overview of the work progress, but also allows for a quick response in the case of emergencies. It also prevents the welder from suffering from claustrophobia.

In addition to a wide-range of other products, CEPRO can also provide the necessary materials to construct a welding booth as a permanent fixture.

We can also supply a mobile welding booth which is suitable and easier to move to different locations. Not only do these booths provide protection but they also offer flexibility for organizing workspace. They provide an optimal solution because they can be quickly dismantled and removed from the work floor when welding work is not being carried out.

The CEPRO welding screens programme is divided into 4 product groups which are suitable for various applications.

- CEPRO Robusto welding screens
- CEPRO Omnium welding screens
- CEPRO Sprint welding screens
- CEPRO Gazelle welding screens

You can find the specific properties of each of the different types of CEPRO welding screens at the beginning of every section in this brochure.

## STANDARD

In Europe, all welding curtains, strips and other products for the protection of welding areas using transparent materials, must meet the European standard: EN-1598. This standard was last revised in 2012.

The EN-1598 standard determines compliance in the area of:

### Filtration
Filtration of harmful ultraviolet (UV) rays and barely visible blue light:
- elimination of UV rays between 210 en 313 nm
- almost entirely filter UV rays between 313 and 400 nm
- filter out blue light on a gradual scale (between 400 and 600 nm)
- restricted filtration of visible light (600 to 1400 nm).

### UV reflection
Welding light projected onto a welding curtain can be reflected to a maximum of 10 per cent. This prevents the welder from being exposed to the dangers of UV rays reflected via the welding curtain.

### UV stability
Materials can discolour due to exposure to UV radiation, such as in the case of sunlight. The discolouration of a welding curtain directly influences its filtering properties. The EN-1598 stipulates the minimum requirements for protection. A CEPRO approved product provides long-term filtration properties.

### Flame retardant
Should a welding curtain catch fire it will self-extinguish once the material has been removed from the heat source. During a test method a piece of curtain 190 x 90mm is exposed to a flame for 15 seconds. If the curtain catches fire, it should self-extinguish within 3 seconds and the flame should not exceed a height of 150mm.

### Mechanical strength
On CEPRO's initiative, standards have also been set for the mechanical strength of welding curtains.

Under the stipulated conditions, the suspension eyelets and seams are strong enough to withstand a weight of 7 kilos.

### Marking
An approved curtain must indicate the following:
- Name and registration number of the manufacturer (in our case that of CEPRO)
- EN-1589 marking
- Month and year of production
- Approval marking

CEPRO curtains have the certification logo of the reputable DIN-Institute (see below)

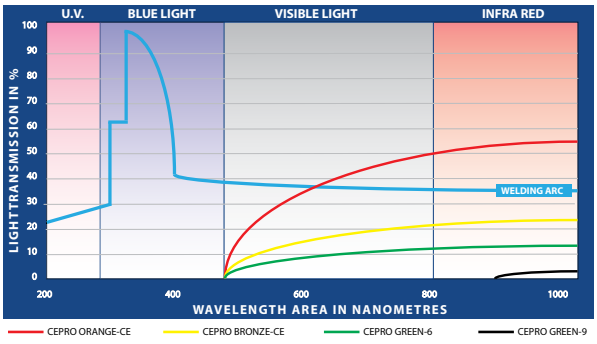
## DIN certification

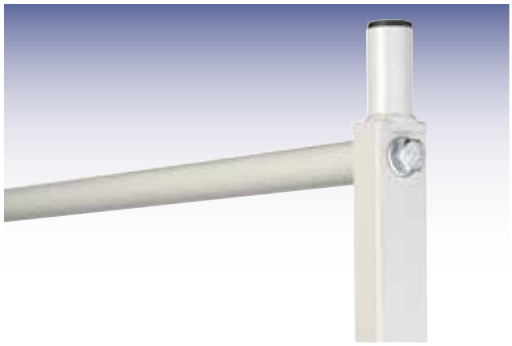
CEPRO is one of the few manufacturers that submits its products to the rigorous certification demands of the German DIN Institute for Standardisation.

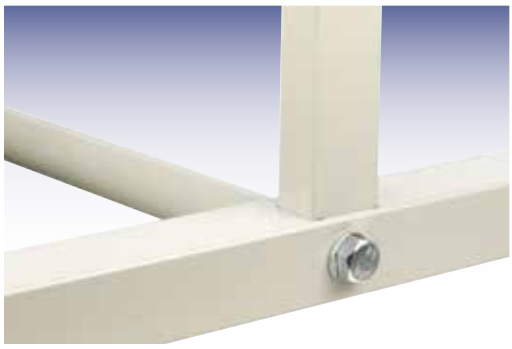
In this certification procedure, our products are subject to annual re-examinations and the certificate is only extended after this approval has been renewed.

This enables us to guarantee our customers that our top quality product(s) always meet the prescribed standards.

## Graphic welding arc







## ROBUSTO WELDING SCREEN

CEPRO Robusto welding screens are very high quality screens. Because they are solidly built they can be used in even the most demanding working conditions.

Unless otherwise stated, all CEPRO welding screens are available as follows:

- 210cm high
- The frame is made from a 35 x 2.5 mm round tube and a rectangular 50 x 30 x 2mm tube
- RAL7035 grey powder coating finish
- Provided with four Ø 75mm swivel castors, two with a brake

### Available models

- Single screen, 215cm wide
- Triptych screen, 215cm wide + 2 swivel arms each 70cm
- Triptych XL screen, 215cm wide + 2 swivel arms each 110cm

### Technical information

- The CEPRO Robusto welding screen is supplied as an assembly kit in a strong cardboard box.
- CEPRO Robusto welding screens are designed for indoor use
- The nuts and bolts used to connect the frame should be checked regularly
- You should regularly check the CEPRO Robusto welding screen for tears and/or other damage. Replace damaged curtains or strips if necessary.

# CEPRO ROBUSTO WELDING SCREEN 215CM

- Height 210 cm
- Width central section 215cm
- Standard 4 swivel castors Ø 75mm
- 2 swivel castors with brake and 2 without
- RAL 7035 powder coating finish
- Round 35 x 2.5mm tube
- Rectangular 50 x 30 x 2mm tube

## WITH CURTAINS

- Curtain height 180cm
- Plastic suspension rings

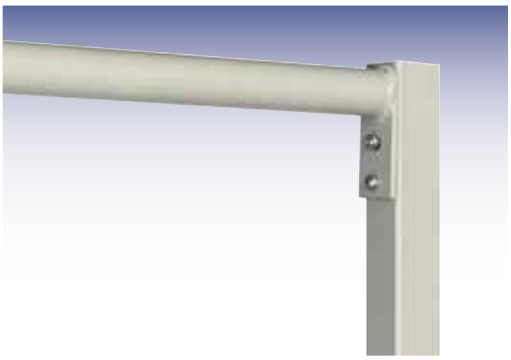
## OMNIUM WELDING SCREEN

CEPRO Omnium welding screens are sturdy and stylish. The CEPRO Omnium welding screen is an all-round welding screen and often used in difficult working conditions.

Unless otherwise stated, all CEPRO welding screens are available as follows:

- 200cm high
- The frame is made from a round 30 x 2mm tube and a 40 x 30 x 2mm rectangular tube
- RAL7035 grey powder coating finish
- Provided with 4 swivel castors Ø 50mm, 2 with a brake



### Available models

- Single screen, 215cm wide
- Triptych screen, 215cm wide + 2 swivel arms 80cm each
- Triptych XL screen, 215cm wide + 2 swivel arms 110cm each

### Technical information

- The CEPRO Omnium welding screen is supplied as an assembly kit in a strong cardboard box.
- CEPRO Omnium welding screens are designed for indoor use
- The nuts and bolts used to connect the frame should be checked regularly
- You should regularly check the CEPRO Omnium welding screen for tears and/or other damage. Replace damaged curtains or strips if necessary.
